

Case Study: Dunshaughlin Community College, Co Meath

The school has installed 17 No. Flamefast Gasguard I proving systems to all of the classrooms that require a gas supply. They have also installed a Coster RFG 652 gas detection system in the boiler house.

The Gasguard I gas proving system is designed to meet the requirements of IGE/UP/11 Edition 2 and BS6173:2009 with numerous additional safety features added based on Flamefast's 30 years of experience in the industry.

The Coster RFG 652 gas detection panel monitors, by means of remote sensors, the concentration of gas in the air, and, when this exceeds the threshold level, it activates the operational relay and the external alarms. This system complies with CEI EN 50194 and CEI EN 50244 regulations. Essential sensors: 1, 2 or 3 sensors for methane, LPG and carbon monoxide.
